## “Hopper”

### Denray Machine is thrilled to showcase The Denray “Hopper”!

A hopper is usually a funnel shaped receptacle, delivering material to a location to be extracted by a method to reduce labor. This design includes a small duct pipe opening near the bottom of the machine, allowing a central system to be connected easily. The easy clean out system prevents operator exposure to dust, unlike models that use dust drawers, also saving precious time and energy.

All of our dust collecting downdraft tables can be modified to be a “Hopper” for an additional cost. Why lift and empty a dust drawer when you could let The Denray “Hopper” do the work?

For more information on any of our products, contact a Denray representative, or your local Denray dealer.

Go ahead, “HOP” right on it!
